

WRHN

Waterloo Regional Health Network

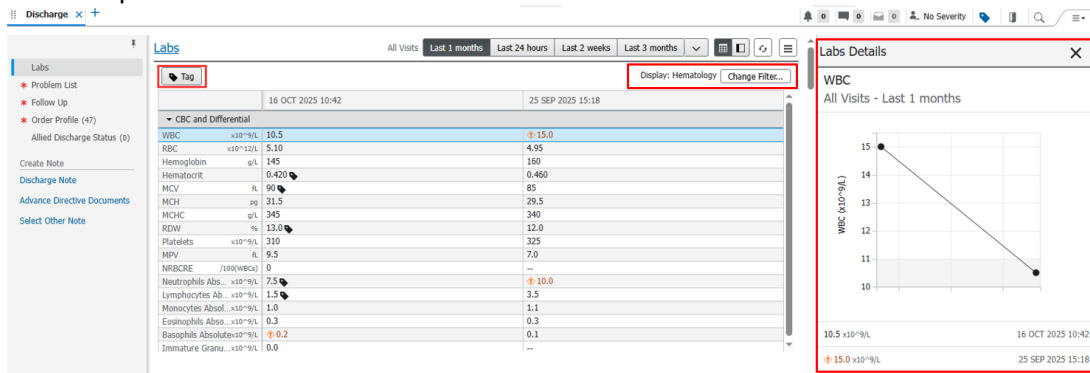

Date:	December 10 th , 2025
To:	All Providers
From:	Dr. Payal Agarwal, Chief Medical Information Officer
Regarding:	Provider View Labs Component Update

Quick Details:

- The Provider View Mpage Lab component will be replaced starting December 10th. This change will be rolled out over a 1–2 week period.

What is Happening?

The Provider View Mpage Lab component is being replaced with a newer version. Staff and physicians will notice the update over the next 1-2 weeks.

What Do I Need to Know?

The Lab component within the Provider View Mpage is similar to Results Review but allows for the tagging of results. Tagged lab results will automatically populate into the Lab section of your note template, allowing you to build documentation while simultaneously performing chart review.

What is Different?

- Lab result misalignment of rows is corrected
- Added ability to filter results by lab grouping (e.g. Hematology)
- Improved trending view
- **Right-click tagging of single results is no longer available; to tag a single result click on the result and select Tag.** Tagging multiple results by using **Ctrl** (for individual selection) or **Shift** (for a range) is still available.

Refer to [Job Aid: Tagging Documents and Results](#) for more information.
